

Dashboard Standard Guidelines — Test Version

Purpose

This dummy guideline defines the visual and analytical standards for the test version of an AI-generated Sales Performance dashboard.

1. Required Layout

Use a clear title at the top. Place four KPI cards in a single row beneath the title. Place the primary trend visualization below the KPI row. Supporting breakdowns should appear in the lower sections.

2. Required KPIs

The test dashboard must contain Total Revenue, Gross Margin, Units Sold, and Margin %.

3. Required Visualizations

Revenue Trend should use a line chart. Revenue by Region should use a bar chart. Revenue by Product should use a bar chart.

4. Filters

Provide Date, Region, and Product filters. Filters should be visually separated from the main analytical charts.

5. Data Rules

Revenue and Cost are numeric measures. Gross Margin is Revenue minus Cost. Margin % is Gross Margin divided by Revenue. Date is the time dimension; Region and Product are categorical dimensions.

6. Visual Validation Rules

The generated dashboard should be compared with the supplied standard image. Check title placement, KPI count and ordering, chart types, relative layout, filter presence, and overall visual hierarchy. Detected deviations should be returned as correction instructions for a subsequent generation pass.

7. Test Acceptance Criteria

Area	Minimum requirement
KPI row	4 KPI cards in one row
Primary chart	Revenue Trend line chart
Breakdowns	Region and Product charts
Filters	Date, Region, Product
Documentation	Dashboard specification + technical documentation
